

THE LONE WOLF MODEL

Key Components:

1. **Current Phase of Price Delivery.**
2. **Internal Range Liquidity (IRL) / External Range Liquidity (ERL).**
3. **Run on PDH / PDL.**
4. **SMT Divergence.**
5. **H1/M30 CISD Entry.**

Daily Chart

Avoid Trading Mondays:

- Begin setup evaluation from Monday onwards.

Identify the Phase of Price Delivery:

- Determine if the market is in expansion, consolidation, retracement, or reversal.

Previous Day High / Previous Day Low Run:

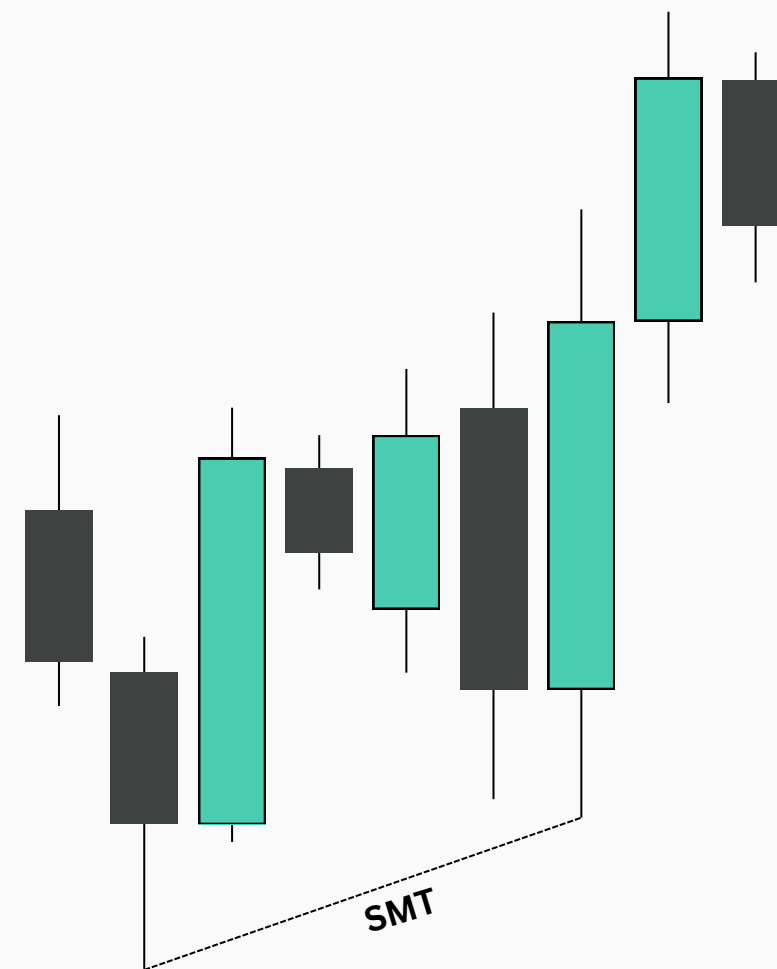

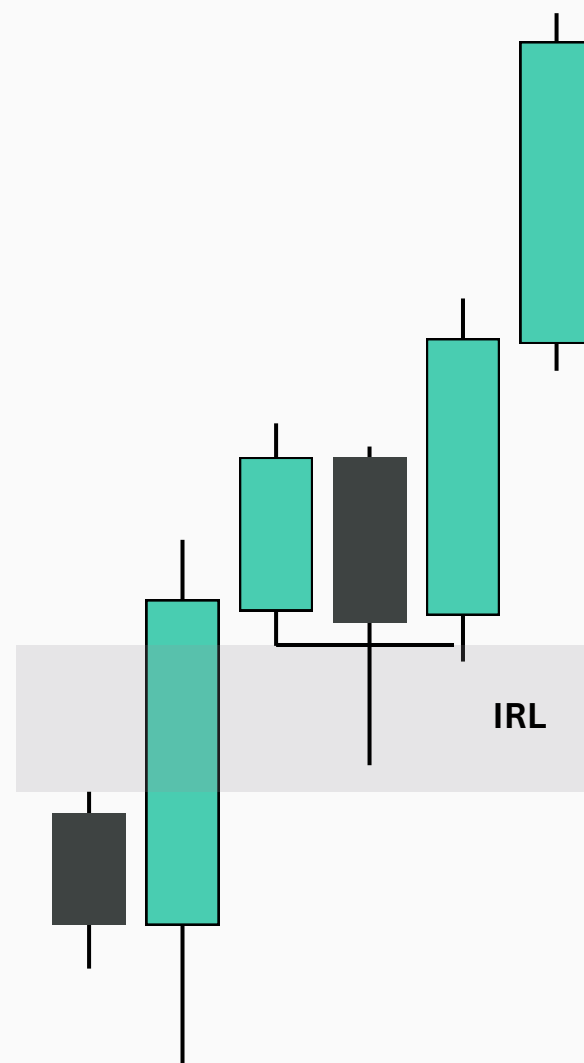

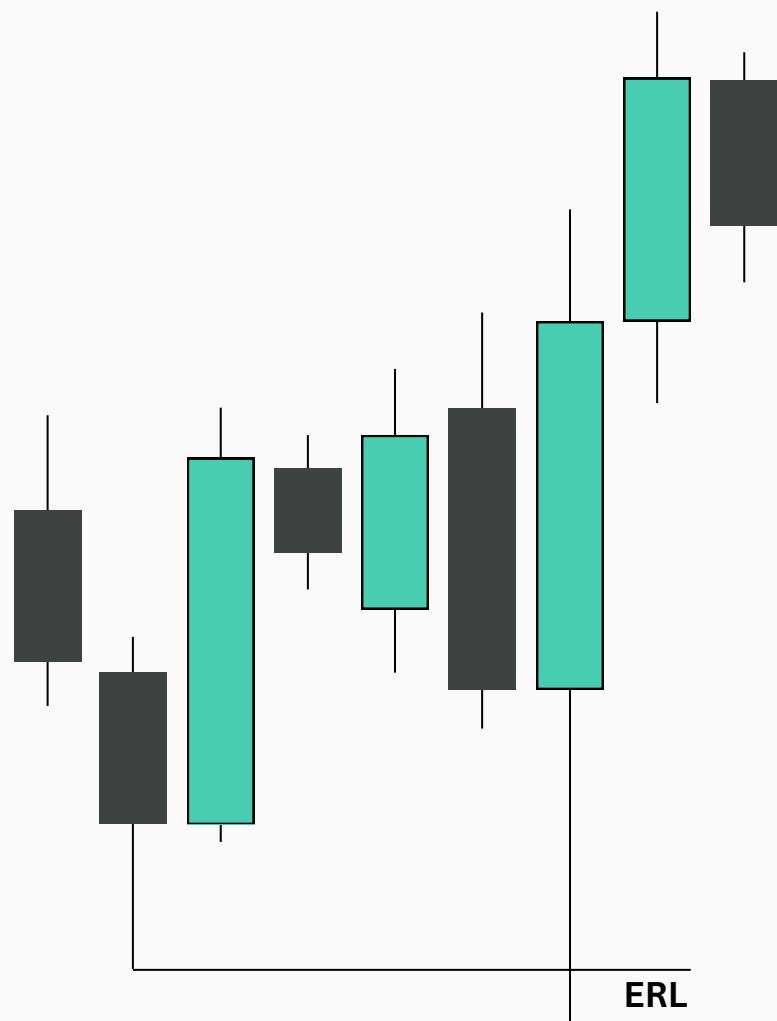

- Look for a run on the Previous Day High or Previous Day Low at Key Level.
- And Remember the NDM Pattern.

IRL/ERL:

- This Run should occur around key levels, such as:
- FVG, Orderblock & Swing High/Low.

SMT Divergence:

- SMT will be used for High Quality Reversal Confirmation

Intermediate Timeframe (H1/M30)

CISD Confirmation for Reversal

- For bearish CISD: look for a series of up-close candles followed by a closure below.
- For bullish CISD: look for a series of down-close candles followed by a closure above.

SMT for High Probability Setups

- Confirm SMT divergence for added confluence.

Entry:

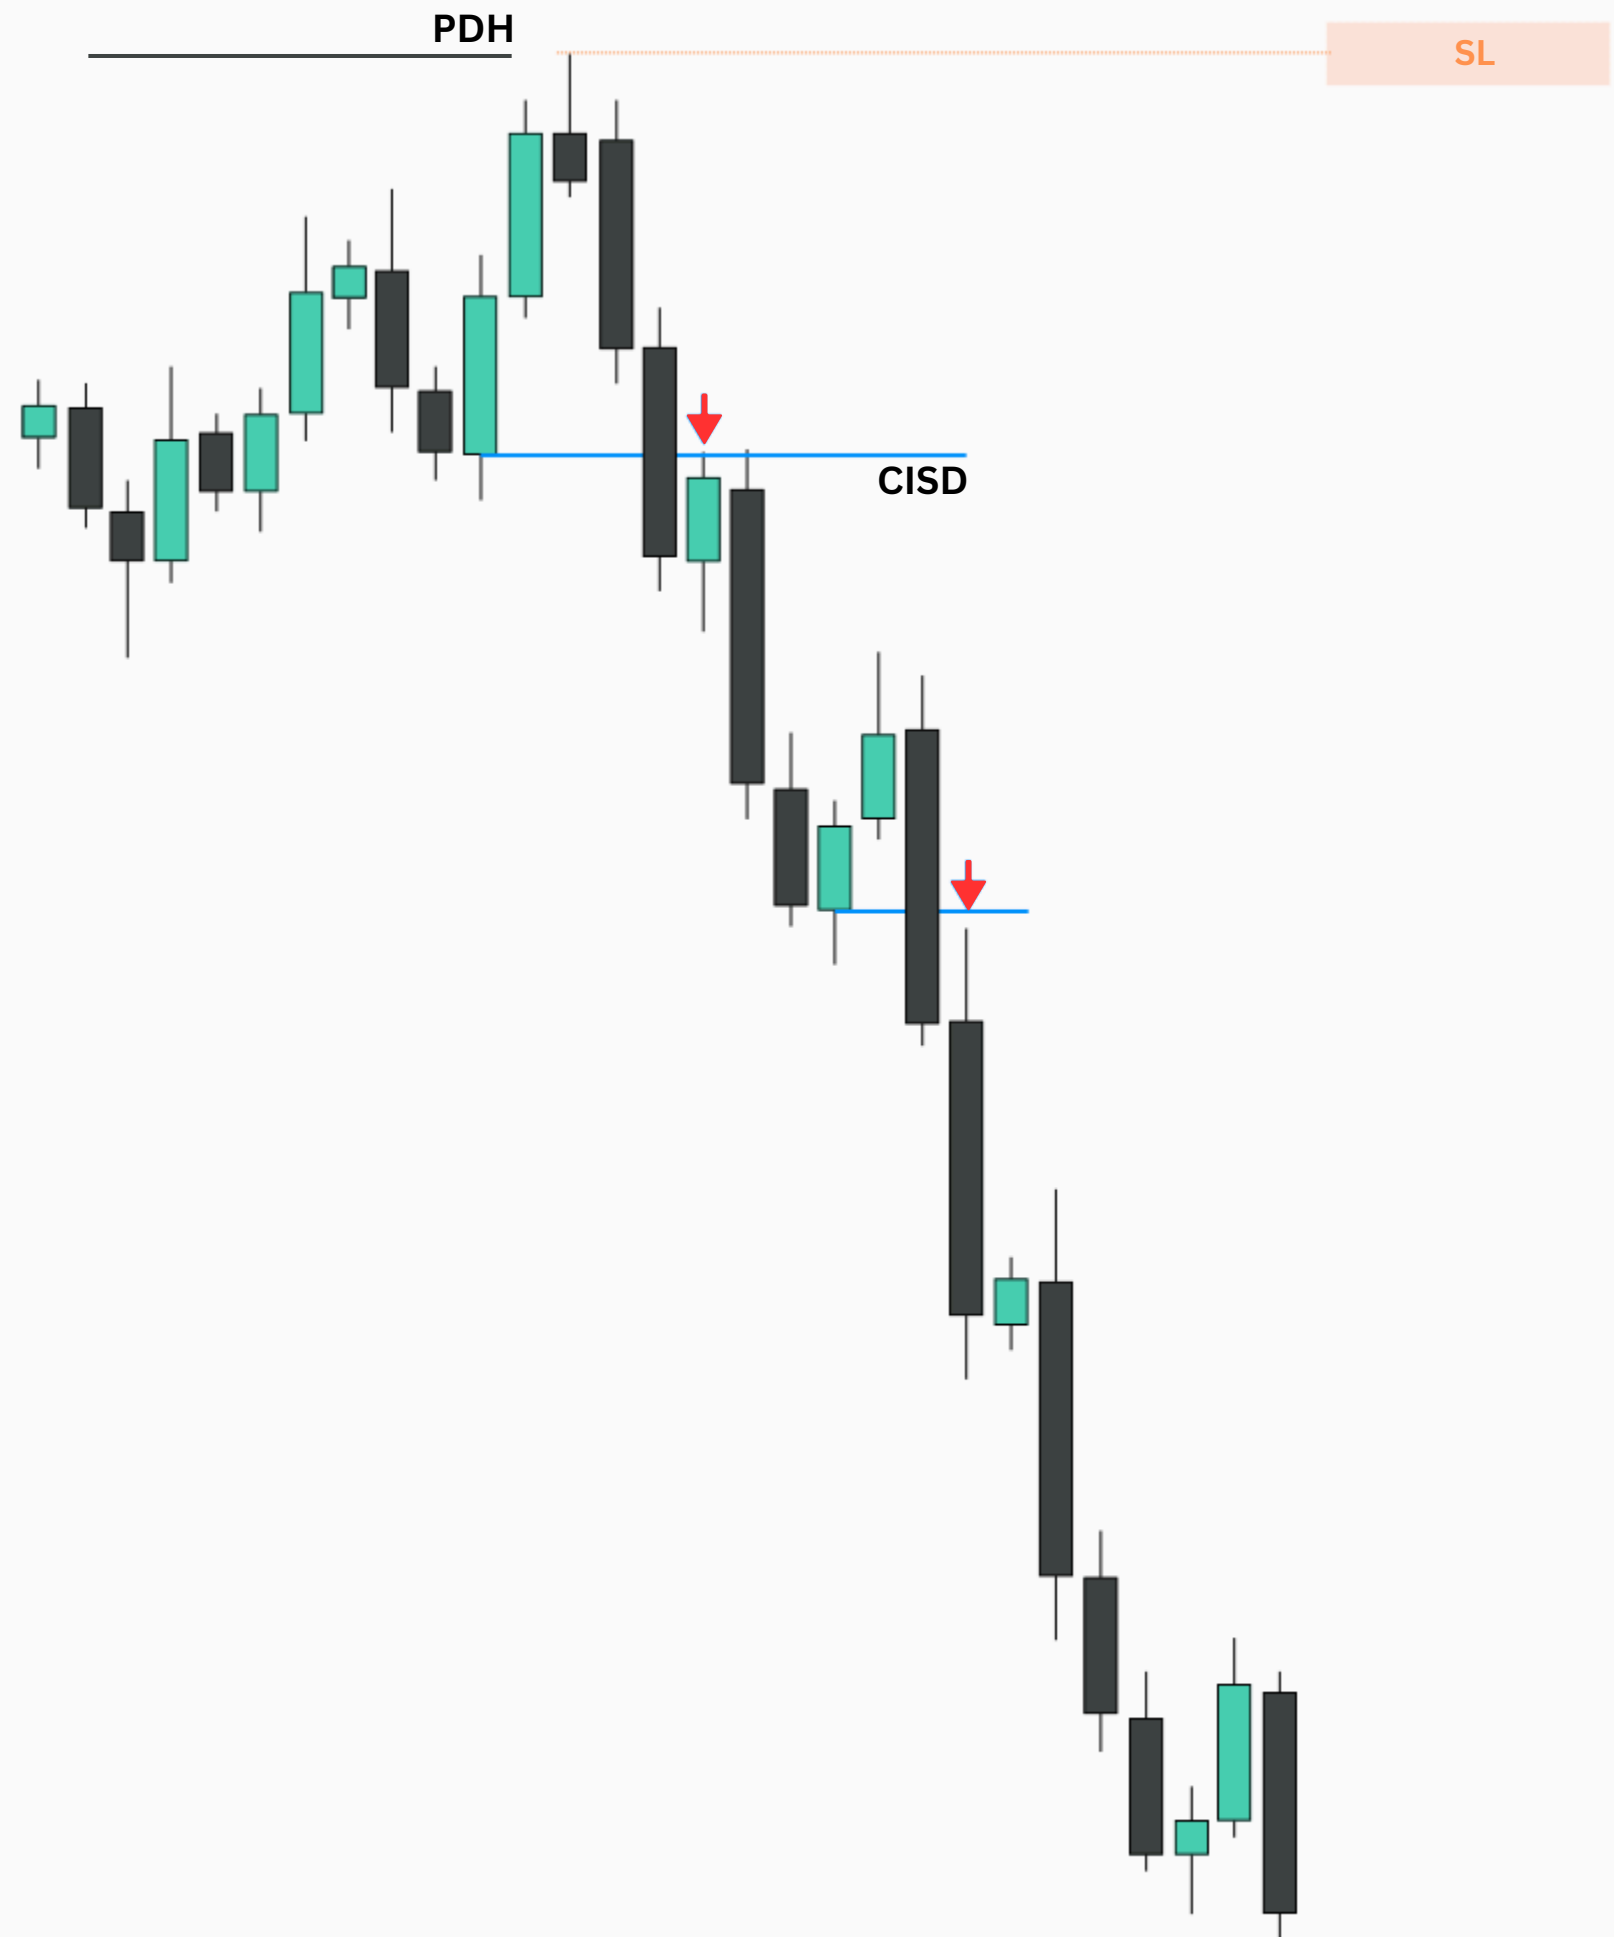

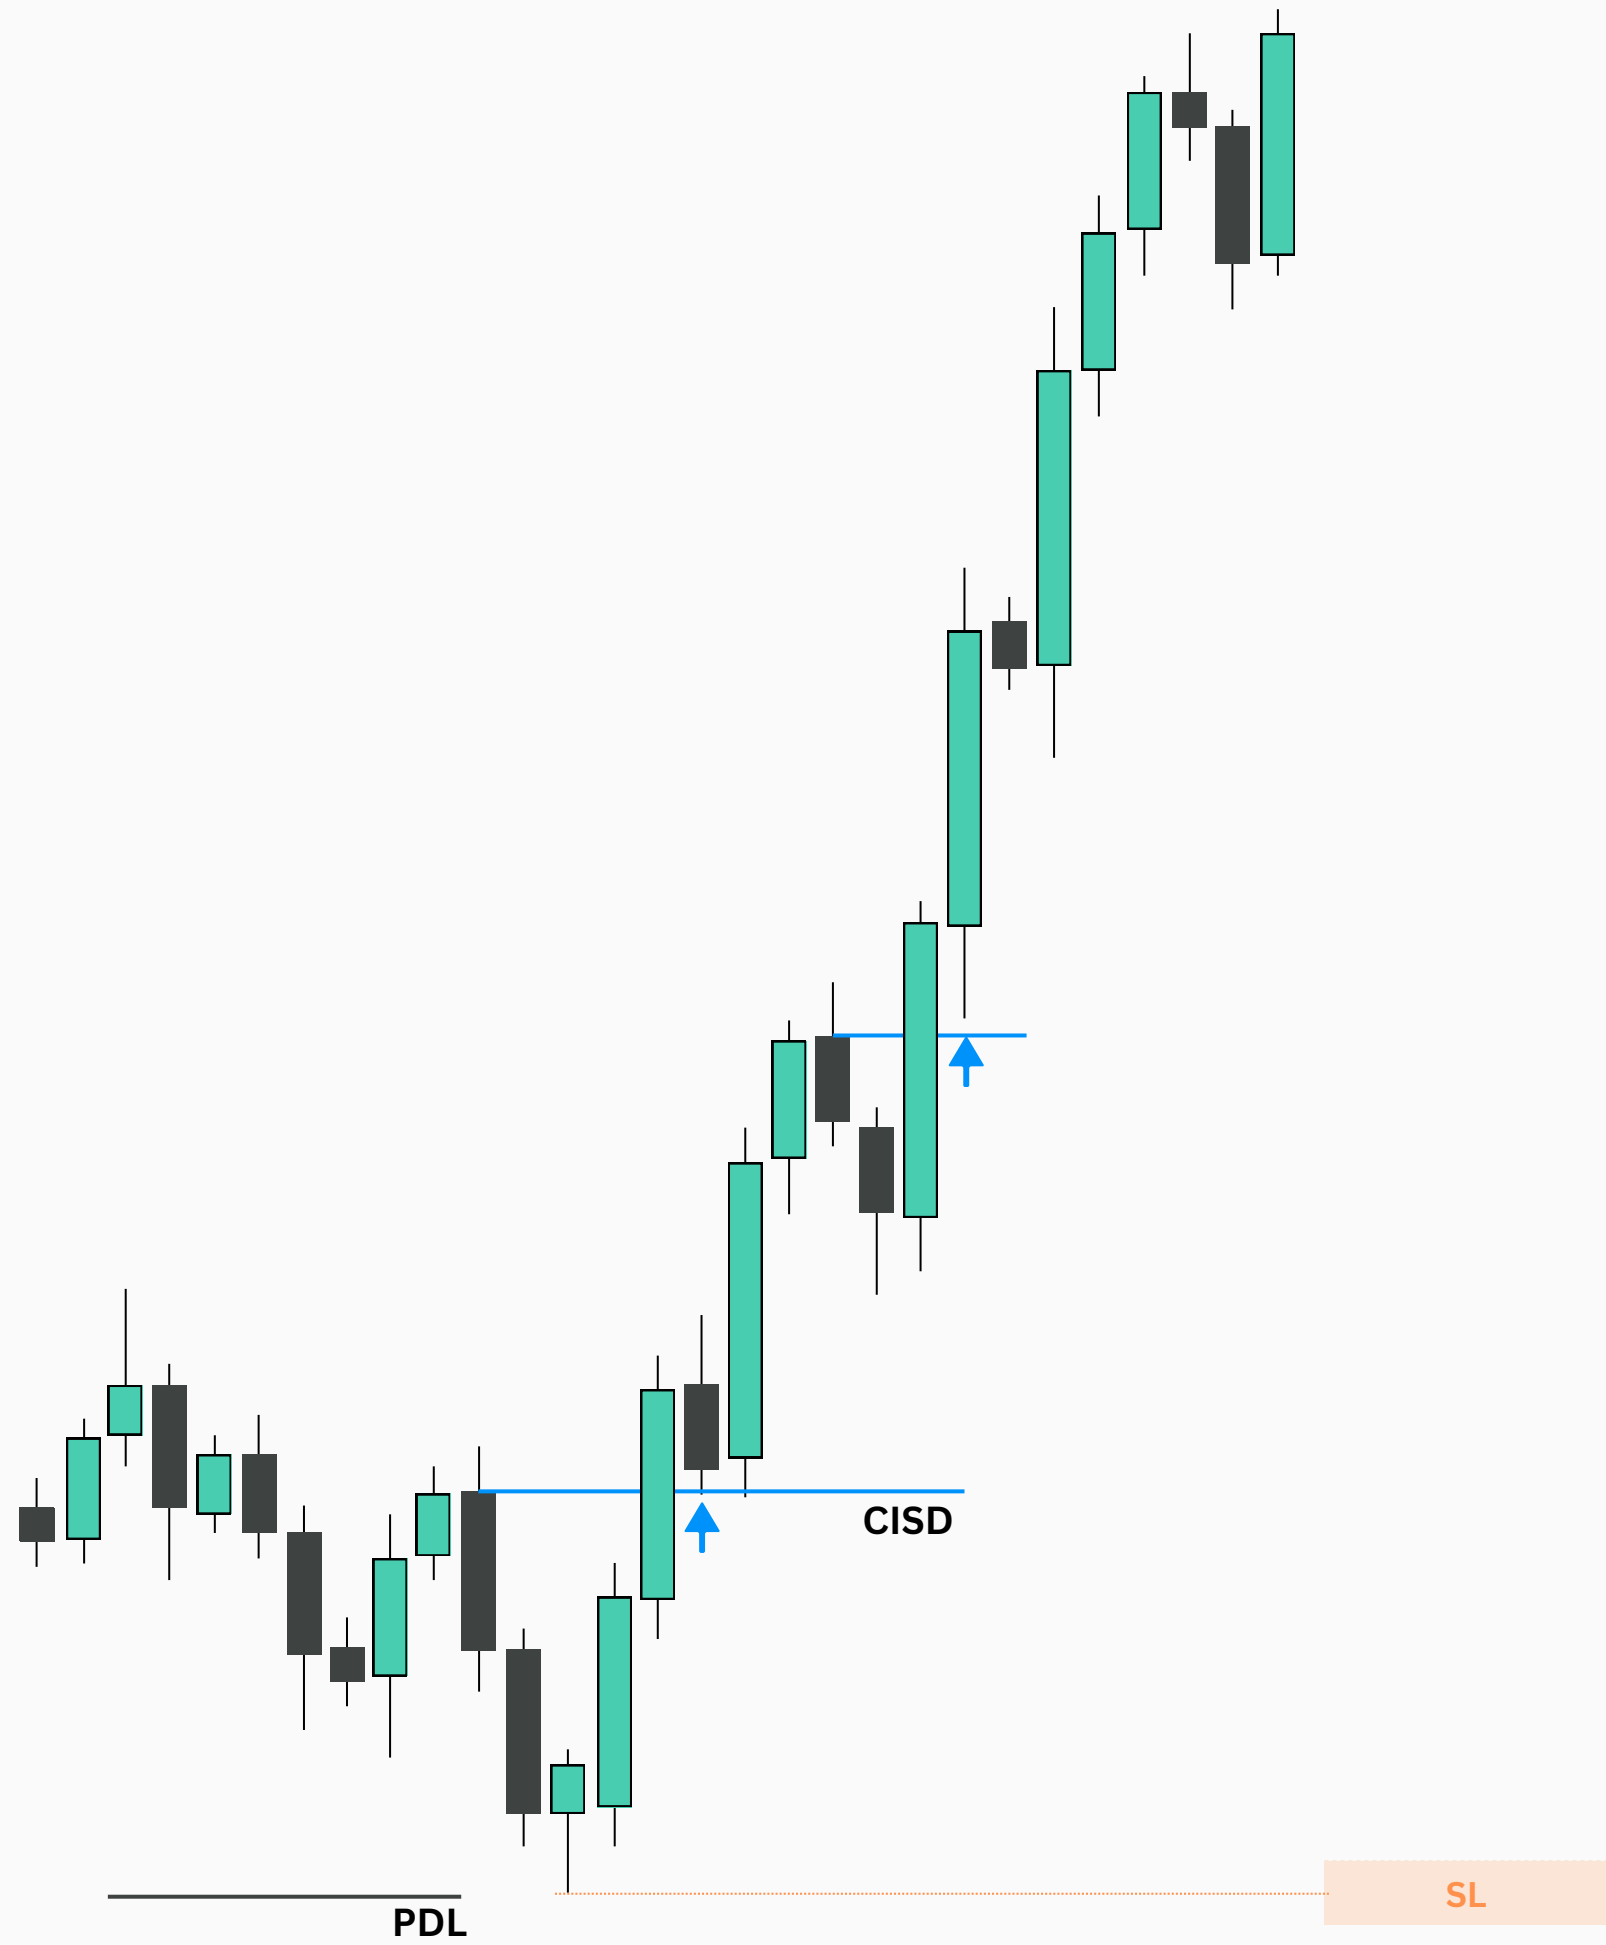

- At the *CISD*: Enter right after the CISD confirmation.
- Continuation OB Entry: If missed, use the next OB formation on H1 or M30 for entry.

Stop Loss Placement:

- *Large Manipulation*: Place SL just below/above the mean threshold of the CISD.
- *Small Manipulation*: Place SL just below/above the high/low of the CISD.

Target:

- Aim for a straightforward 2R or The Failure Swings on the H1 Chart.
